

PLATINUM RESCUE SOLUTION

Heat Press Platen Cleaner & Residue Remover

DTF SOLUTIONS Platinum Rescue Solution is designed to help remove hardened deposits, adhesive, ink, scorch marks, and residue from heat press platens, heat stations, and other equipment surfaces.

How to Use the Rescue Solution on the Upper Plate of a Heat Press

1. Warm the upper heat press platen slightly. The platen should be warm, not hot. Use caution to avoid burns.
2. Apply a small amount of Platinum Rescue Solution to a lint-free cotton rag.
3. Wipe the affected platen area to help loosen residue, adhesive, ink, scorch marks, or buildup. Then carefully scrape away softened contamination using a suitable non-damaging scraper.

4. Wipe the platen clean and repeat the process as needed until the surface is smooth and free of residue.
 5. Finish by wiping the platen with a clean rag lightly dampened with water to remove any remaining Platinum Rescue Solution.
-

Important Safety Notes

Always use in a well-ventilated area. Avoid contact with skin and eyes. Do not apply to an extremely hot surface. Keep out of reach of children. Test on a small area first when using on sensitive or coated surfaces.

PLATINUM RESCUE SOLUTION

Heat Press Platen Cleaner & Residue Remover

DTFSOLUTIONS Platinum Rescue Solution is designed to help remove hardened deposits, adhesive, ink, scorch marks, and residue from heat press platens, heat stations, and other equipment surfaces.

How to Use the Rescue Solution on a Heat Station

1. Warm the heat station slightly. The heat station plate should be warm, not hot. Use caution to avoid burns.
2. Apply a small amount of Platinum Rescue Solution to a lint-free cotton rag.
3. Wipe the affected plate area to help loosen residue, adhesive, ink, scorch marks, or buildup.

4. Wipe the plate clean and repeat the process as needed until the surface is smooth and free of residue.
5. Finish by wiping the plate with a clean rag lightly dampened with water to remove any remaining Platinum Rescue Solution.
