A smarter production printer for apparel decorators

Shorter setup. Easier operation. Better day-to-day reliability.

The X2 streamlines the way operators send jobs, manage repeat work, and keep production moving. The result is a cleaner workflow for custom apparel, repeat designs, and busy print environments.

WORKFLOW

Print jobs should not slow down production.

The X2 combines onboard Wi-Fi, Ethernet, USB flash drive support, a large touch screen, and internal job storage to make print handling faster and easier from setup to repeat production.

Wi-Fi connectivity
Send graphics wirelessly with no direct computer cable required. Ethernet and USB flash drive are also available.

Faster job handling
The quad-core processor and 32 GB flash drive help store repeat jobs and keep common designs ready.

Large touch panel
A 7-inch interface makes controls, job status, and day-to-day operation easier to manage.

Audible alerts
Audio notifications let operators know when a print is complete or when the printer needs attention.

Less downtime starts inside the printer.

From the encoder strip to the control boards, key internal systems are designed to reduce common DTG printer issues caused by overspray, moisture, dust, wear, and nuisance sensor errors.

Tool-free filters

Magnetic filter trays slide out for fast replacement with no screwdriver required.

Metal encoder strip

A 300 LPI metal strip improves print-head position tracking and reduces alignment errors.

Relocated exhaust fans

Fans above the print heads help pull fine ink particles away from critical components.

Protected electronics

Hydrophobic coatings help reduce moisture-related electrical issues.

Sealed print heads

Individual heads are sealed in the cartridge to protect delicate electronics.

Smarter sensors

Repositioned and redesigned sensors reduce common nuisance errors.

X2 at a glance

A compact hybrid DTG+F printer designed for easier operation, more flexible file transfer, stronger reliability, and smoother repeat production.
