

How To Use Inkedibles™ Templates For Pre-Cut Frosting Sheets

In order to get your images / designs to cover the entire pre-cut size (1.18" circle size example shown below) you need to follow these instructions (instructions shown for MSWORD 2010)

1. Open the template in MS WORD (the page setup is automatically set to A4)
2. If you want to remove the border from the circle, select it and then select from menu: Format -> Shape Outline -> No Outline

3. To import your image into the circle, while you have the circle selected, choose from menu: Format -> Shape Fill -> Picture (you can now import your picture)
